E-Commerce Sales Data — What the numbers mean for the business

PREPARED BY	Sandeep Kumar SankaraGuptam
INTERNSHIP	ApexPlanet Data Analytics Internship
DATE	July 2026
COMPANION REPORT	E-Commerce Sales Data – EDA Report

Key Business Insights

Eight data-driven findings from the E-Commerce Sales analysis.

01

Healthy Revenue Performance

Total revenue across the dataset reflects consistent, healthy business performance, with a clear split between high- and low-contributing categories.

02

Category Concentration

A small number of product categories — led by Electronics — generate a disproportionate share of total revenue.

03

Product-Level Concentration

A handful of products (Mobile, Book, Laptop) drive the majority of sales, both in revenue and quantity sold.

04

City-Level Variation

Certain cities (Patna, Mumbai, Kolkata) significantly outperform others (e.g. Pune) in both revenue and order volume.

05

Seasonal Peaks

Monthly analysis reveals a clear post-September rebound, peaking in October–November — a defined seasonal sales window.

06

High-Value Transactions

Box-plot analysis flags a set of outlier transactions above ₹430,000, representing premium, high-spend customers.

07

Revenue Drivers

Quantity purchased and Unit Price are the two strongest statistical drivers of Total Amount (revenue).

08

Age-Independent Spending

Customer age shows virtually no correlation with purchasing behaviour or revenue — the audience spans all age groups equally.

Business Recommendations

Actionable next steps based on the analysis.

1

Protect Stock for Top Sellers

Maintain sufficient inventory for Mobile, Book, Laptop and other high-revenue products to avoid stockouts during peak demand.

2

Double Down on Winning Cities

Increase marketing investment in Patna, Mumbai and Kolkata, while running targeted campaigns to lift underperforming markets like Pune.

3

Plan Around Peak Months

Align promotions, staffing and inventory buildup with the October–November sales peak identified in the trend analysis.

4

Increase Basket Size

Use bundle offers and volume discounts to raise Quantity per order — the single strongest revenue driver.

5

Promote Premium Products

Since Unit Price is highly correlated with revenue, feature higher-value products more prominently in merchandising and recommendations.

6

Reward High-Value Customers

Design a loyalty or VIP tier for the outlier high-spend transactions identified in the box-plot analysis.

“Product demand, pricing, and purchase quantity are the primary factors influencing revenue, while customer age has minimal impact on sales. Optimizing inventory, strengthening marketing in high-performing cities, and promoting premium products can meaningfully improve revenue and support sustainable growth.”

Overall Business Insight

This companion report distills the E-Commerce Sales EDA into eight core insights and six practical recommendations, giving stakeholders a clear, presentation-ready view of where revenue comes from and how to grow it.
